

BrandMaker App

Release Notes Version 7.4

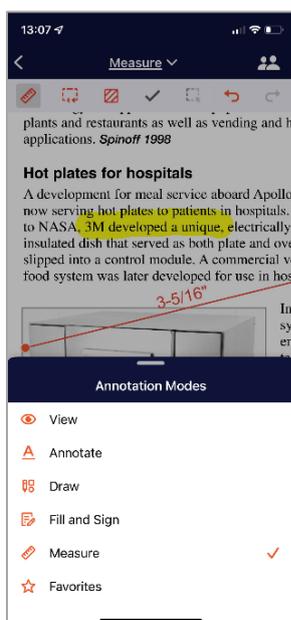

New App Version 1.7.0

Adding review functionality

The Review Manager can now be accessed via the BrandMaker App. By integrating this module, you can now perform and easily approve reviews on the go.

In version 1.7, the BrandMaker App has been significantly improved to provide support for reviews. The app now shows the reviews for which the user is registered as a participant or owner.

Reviews can be managed not with an identical, but very large range of functions, almost like in the desktop version.

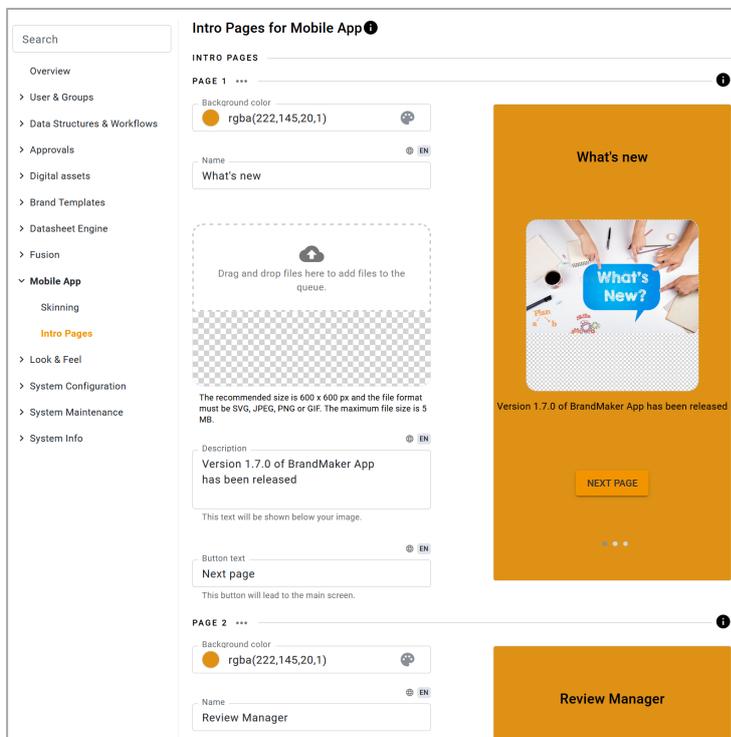

In detail, this includes:

- Display of reviews the user is registered as a participant or owner
- Open, edit, and make approval decisions on all reviews. This involves editing multi-page documents or review participants.
- Mark and annotate the document to be reviewed. Each highlight and annotation is immediately visible to all participants.
- Comment and then link the comment to multiple pages in the overview
- Zooming with two finger pinch to zoom gesture
- Select multiple, non-contiguous pages from a multi-page document for full-screen display, and then edit them

Be aware that desktop features such as comparing two versions side by side are not available. Video files can be played in the Review Manager, but not yet annotated in the current version.

Intro Pages

Administrators can optionally configure one or more intro pages to be displayed in the BrandMaker App. These intro pages can be utilized as your welcome pages. The text fields can be localized for different languages. The intro pages are displayed for all users of the system after login once the app is started.

App availability

The BrandMaker App 1.7 is now available for iOS and Android. Use the QR codes below to download it for free.

Apple App Store

Use your iPhone and point the camera at this code to proceed to the download.

Google Play Store

Use your Android device and point the camera at this code to proceed to the download.
